Based on the cylinder model and FluidSIM, you can simulate pressure and flow waveforms. Simulating a pipe can be very complicated: you need to know the length, the angle and the roughness of the pipe. Many details have to be considered. With FluidSIM, you can simulate an arbitrary number of pipes. FluidSIM is a powerful tool for solving complex problems. Check out the example-project to see how it works! Flue gas analyzers are widely used for analyzing the composition of exhaust gas from a coal or gas-fired power plant. Many gas analyzers require the measurement of two physical parameters, as they operate by monitoring the electrical signal induced in a coil by the electrochemical reaction of the gas with the redox-active agents in the electrolyte solution.
